Why these happened

MISSING

No refund line in the MTF payment files. Common causes: enrollment or bank-routing problems, or a claim that never reached the manufacturer. Often fixable in bulk.

340B DENIALS

Refunds denied as 340B (code N907), but HRSA's 340B registry shows no contract-pharmacy relationships for this store. These should be overturned.

UNDERPAID

The refund was calculated from a lower price than you actually paid. Your wholesaler invoices support the difference.

Recommended next steps

- **This week:** confirm MTF bank and payment-file routing (likely fixes several missing refunds at once).
- **Next 2 weeks:** we file good-faith inquiries on all 7 340B denials and 6 underpayments.
- **30 days:** escalate anything unresolved through the CMS MTF complaint process.
- **Before January:** set up monitoring for the 15 drugs joining in 2027, including Ozempic and Wegovy.

How we did this

We matched your dispensing records to the MTF payment files, Beacon reports and bank deposits, claim by claim. Expected refunds were calculated from published list prices and CMS negotiated prices, and 340B status was checked against HRSA's public 340B registry (OPAIS). All data was handled under a signed HIPAA business associate agreement with read-only access.

Ready to recover \$6,698?

No upfront cost. You only pay 25% of what we actually recover.
